

Tangail Saree E-Commerce

V1 Build Plan & Time Estimate

Stack: Next.js 16 + TypeScript · Tailwind CSS · Prisma + PostgreSQL · React Hook Form + Zod · Vercel

10–14 hours

Active build time, over 4–6 work sessions

1–1.5 weeks

To launch, including review, product content and hosting setup

3–5 weeks

Typical time for one developer working alone

Build Phases

#	Phase	What gets built	Time
1	Setup	Prisma with PostgreSQL, Zod, React Hook Form, shadcn/ui; project folder layout; environment settings; seed script	1 h
2	Database schema	Product, Category, ProductImage, Customer, CustomerAddress, Order, OrderItem, OrderStatusHistory, AdminUser, Discount. Prices stored in whole taka. Each order keeps a copy of prices and delivery details from when it was placed.	1 h
3	Admin login	Email and password login with a secure session; all admin pages and actions protected; command to create the first admin	1–1.5 h
4	Product & category admin	Add, edit and archive products; upload several images per product; sale price with optional start/end dates; availability on/off	2 h
5	Shop pages	Home, Shop (filter and sort), Product page (gallery, quantity, Add to Cart), About/Contact; link previews for Facebook sharing	2–2.5 h
6	Cart	Several sarees and quantities in one cart, saved in the browser; prices always re-checked by the server	1 h
7	Checkout & orders	Guest checkout (name, phone, address, district/area). Server calculates all prices, discount and delivery charge; links repeat customers by phone; creates the order safely in one step; order confirmation page.	1.5–2 h
8	Order admin	Dashboard (pending/confirmed orders, sales, recent orders); order list and details; status updates with notes and history; courier and tracking info; customer list with past orders	2 h
9	Discounts	Order-level discount (fixed amount above a minimum order value), managed in admin and applied by the server	0.5–1 h
10	Testing & launch	Price calculation tests; full order-flow test; security checks; deploy to Vercel; database backups; custom domain	1.5–2 h
	Total		10–14 h

Decisions Needed Before Starting

#	Question	Recommendation	Answer
1	Database host	Neon (free PostgreSQL)	
2	Image storage	Cloudinary (resizes images automatically)	
3	Delivery charge	Flat, or inside/outside Dhaka (e.g. Tk 70 / Tk 130)	
4	Payment	Cash on delivery only for V1	
5	Site language	English, Bangla, or both (both adds 1–2 h)	
6	Brand	Name, logo, colors, Facebook link, phone/WhatsApp	
7	New-order email alert	Yes, via Resend (adds about 30 min)	

Owner To-Do

- Real product photos and descriptions
- Create database and image storage accounts (guidance provided)
- Register a domain
- Test the full order flow on a phone before the Facebook launch

Not in V1

Customer accounts/OTP, online payment, courier API, live tracking, coupon engine, wishlist, reviews, advanced analytics, warehouse inventory, mobile app.
